surfaces

Architects and designers around the world have relied on our architectural Surfaces to create dramatic signature statements for more than 50 years. As diverse as the projects for which they are used, F+S Surfaces are beautiful on their own and offer a wide array of choices for walls, columns, elevator interiors (lifts), and more.

Bonded Metal and Bonded Quartz are two of our Surfaces families. Each blends tremendous creative flexibility with the superior quality and performance of all Forms+Surfaces products. Specifically chosen for Indian Markets, the designs on the following pages allow you to express cool, contemporary sophistication, bring the warmth and richness of artisan craftsmanship to classic interiors, and transform public settings of all kinds.

bonded metal

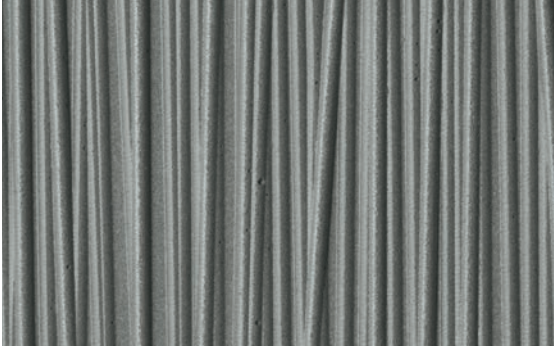

Bonded Metal has achieved a place of distinction among high-performance surfacing materials. Providing a striking breadth of design possibilities, Bonded Metal is the product of a unique technology that casts metal granules in a tough, FRP matrix. Advanced mold-making techniques assure perfect reproduction of every fine detail in the original patterned surface. The result is lightweight but extremely durable castings with the character and appearance of solid metal. Bonded Metal can be specified for walls, doors, elevators, accents or any application where visual richness and exceptional resistance to wear are requirements. Field-proven for more than 40 years, Bonded Metal is exclusive to Forms+Surfaces.

Bonded Metal selections are defined by three basic parameters: 1) Colors are established by the metal incorporated into the Bonded Metal matrix. 2) Patinas are a contrast-enhancing treatment applied to the Bonded Metal surface. 3) Patterns are the distinctive texture or design cast into the Bonded Metal surface. Most Bonded Metal patterns are available in the color/patina combinations shown here; refer to the following pages for specific pattern details.

The seven patterns shown here are special, full-scale patterns. Some are available with symmetrical, mating left and right sides and others are full-scale monolithic patterns that can be used intact or separated into two or more panels for doors and other applications. While any Bonded Metal pattern may be specified for our doors, these seven patterns are designed specifically for full-sheet use on doors, wall panels or other large-scale applications where a dramatic visual effect is desired. Choosing just one side of the pattern for a single leaf door or narrower wall panel is also an option.

bonded quartz

Bonded Quartz is a high-performance surfacing solution ideal for today's interior spaces. Unlike anything else on the market, Bonded Quartz incorporates ceramic microspheres in a fiber-reinforced polymer matrix. This combination yields incredibly durable, lightweight castings that have a stunning surface appearance and are easy to clean. The standard colors for Bonded Quartz are White and Charcoal; custom colors are also an option. Bonded Quartz is ideal for use on walls, columns, elevator interiors, counter facings and other applications where visual richness is desired.

BONDED QUARTZ COLORS

Bonded White

Bonded Charcoal

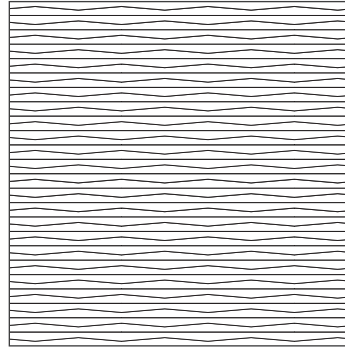

Bonded Quartz selections are defined by two basic parameters: 1) Colors include the two options here. Both are integral to the castings so scratches and blemishes are far less apparent than with surface-applied color finishes. 2) Patterns are the distinctive texture or design cast into the Bonded Quartz surface. Some Bonded Quartz patterns are available in both colors, some in only one color; refer to the following pages for details.
