VersaFlute

Fluted wall and ceiling panels in wood-polymer composite — a PVC laminate face over a WPC core. The look of solid timber battens, with none of the swelling, splitting or termites.

UP TO 2950 MM LONG

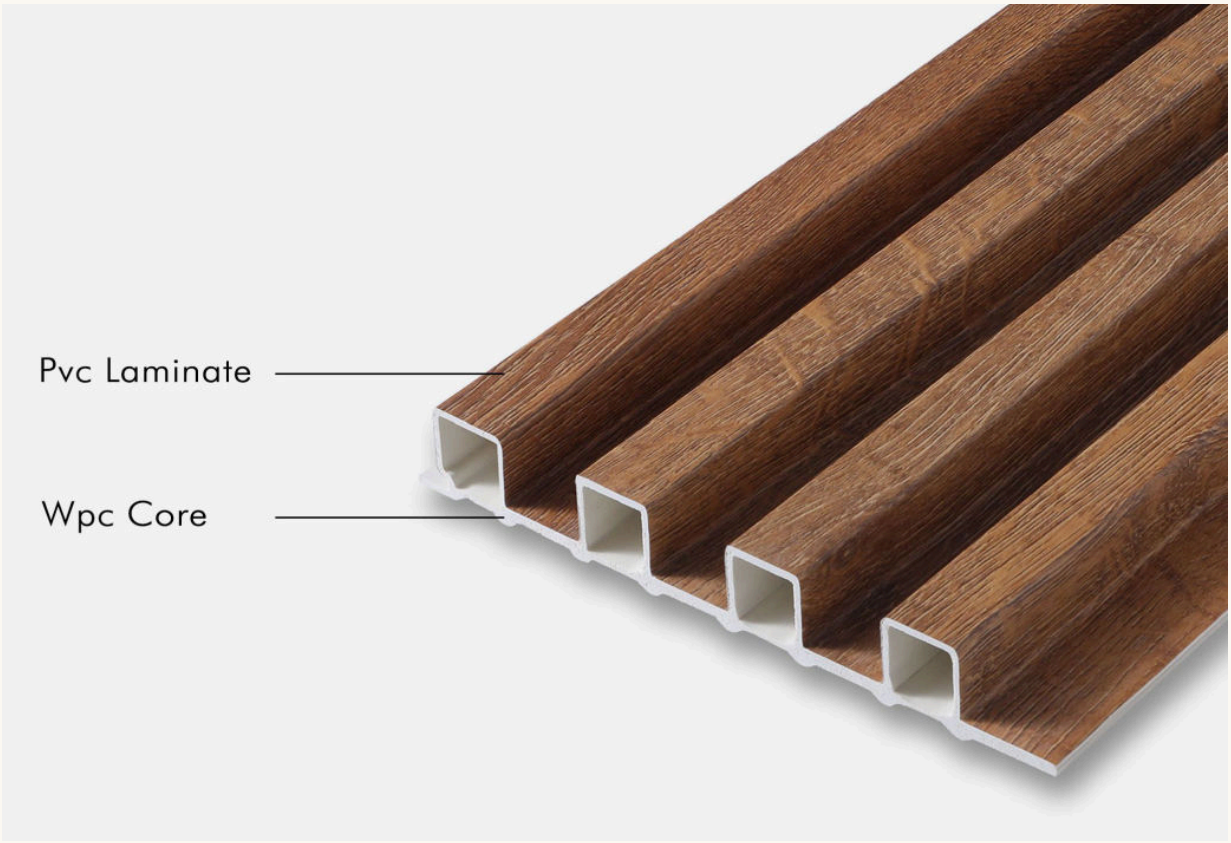

8–27 MM PROFILES

WATER & TERMITE PROOF

THE SYSTEM

Wood polymer composite

A multilayer panel: a PVC laminate face bonded to a hollow WPC core. The face carries the grain and the emboss; the core carries the strength and keeps the weight down. Together they give the warmth of a timber batten wall on a substrate that will not move.

PVC LAMINATE FACE OVER HOLLOW WPC CORE

Real wood look

A printed and embossed PVC face that holds grain detail at arm's length.

Water proof

WPC core carries no cellulose to absorb water — safe on damp walls and covered exteriors.

Termite proof

Nothing in the panel for termites to feed on, unlike solid batten or MDF.

Quick install

Clips to a battened frame or bonds direct — no dust, no site finishing.

Easy to clean

Damp cloth and mild detergent; the flutes shed dust rather than collecting it.

No site finishing

Panels arrive finished, so there is no sanding, sealing or polishing on site.

CONTENTS

Nine profiles, one fixing method.

Profiles are grouped by thickness. Every finish within a group shares the same section, so a specification can move between colours without redrawing a detail.

8 mm

2950 × 145 MM
THICKNESS 8 MM · 6 FINISHES

The slimmest profile in the range — a fine, closely spaced flute for full walls and ceilings where the rhythm should read as texture rather than as separate battens.

12 mm Dual

2950 × 180 MM
THICKNESS 12 MM · 4 FINISHES

Two wide ribs to a panel at 180 mm — the fastest way to cover area, and the calmest reading of the fluted look.

A batten wall without the battens — no dust, no site finishing, no movement.

14 mm

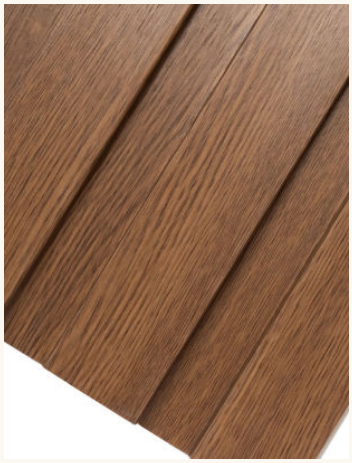

2950 × 195 MM
THICKNESS 14 MM · 4 FINISHES

A broad three-rib profile at 195 mm with a pronounced shadow gap. Suited to double-height walls where a fine flute would disappear.

Accessories

Corner Profile

Closes an external corner or a panel end without an exposed cut edge.
3000 × 25 × 25 mm · 3000 × 30 × 30 mm

Metal Fastener Clip

Concealed fixing to a battened frame. Allows the panel to be lifted off later without damage.

ORDERING

Order corner profiles in the same finish and batch as the panels. Allow one clip per batten crossing, at 400–600 mm centres. Quote the profile thickness and the finish name together — several finish names repeat across thicknesses.

INSTALLATION

01 Check the substrate is true and dry. On masonry, batten out at 400–600 mm centres; on a flat, dry wall the panel can be bonded direct.

02 Let panels acclimatise on site for 24 hours, laid flat, before cutting.

03 Set out from the most visible corner so any cut panel lands where it will be least seen.

04 Fix with the metal clip into each batten crossing, or bond with a polymer adhesive applied in continuous beads along the ribs.

05 Close external corners and panel ends with the matching corner profile.

06 Order the full quantity against a single batch — printed decors vary slightly between production runs.

Interior use throughout the range. Exterior and covered-soffit use is suitable for the WPC profiles but avoid elevations in constant direct sun, where any printed decor will fade over time. Clean with a damp cloth and mild detergent; avoid solvents and abrasive pads.
